Airway Physiotherapy for Naturally Better Breathing

Mucus Clearance & Lung Expansion Device

**Richard Bradshaw.** Great Britain  
★★★★★ **Amazing results...**

I bought my air physio approximately three weeks ago, it seems to work for me straight away. I am used to suffering from mucus in the morning coughing constantly for two hours and I found it hard to walk up the stairs to my bedroom without feeling out of breath. I am amazed how I'm feeling now, I can walk again, have no problem going up the stairs, my only cough for about a minute in the morning to clear my throat. This piece of equipment has changed my life. I suffer from many different ailments: heart failure, multiple myeloma, and various other conditions brought on by my illness. I've tried all sorts of things to improve my lung function. I am in English. I have found this two years ago, my life would've been so much easier. Thank you too, who ever invented this, I am forever in your debt.

★★★★★ **Worked from day one**

I have had an operation on my sinuses, but I am left with a nasal drip and asthma. I read some positive reviews on this product and decided to give it a go. I am so pleased I did, I have used it for 2 weeks now and it worked from day one. I have a productive cough every time which brings immediate relief. I would definitely recommend this product! Thank you to the inventor.

**Chris Williams.** Australia  
★★★★★ **My lungs are open and clear and this...**

My lungs are open and clear and this has made me feel much more capable and positive as a result. I've been using a puffer for the past 30 years and now I never need it. This product is perfect. I think my lungs must have had a lot of moisture in them. Thanks to the inventor and distributors as this is a game changer.

★★★★★ **I have c.o.p.d**

I have c.o.p.d, and have had a constant cough for years. I found it so hard to sleep, as soon as I lay down I started coughing. I received my air physio this morning and the first time I used it within 15 minutes I removed lots of mucus. I've used it twice today. I'm lying in bed now and it's the first time as long as I can remember I haven't coughed. I'm looking forward to a good night's sleep, best thing I've ever purchased. I'm not even wheezing, my lungs feel really clear. Thank you AIR PHYSIO IM GOING TO RECOMMEND THIS TO EVERYONE.

★★★★★ **If you have allergies, I couldn't suggest this product enough.**

I just bought it yesterday and it came from Amazon same day. I was skeptical. I have been stuck at home with COVID and I have been struggling to breathe due to all the phlegm stuck in my windpipe and throat. No matter what I took over the counter, it didn't seem to help. I started panicking that I'll need to go to the hospital because walking was getting difficult as breathing was as well. I will tell you now that while this is pretty weird it works. I blew into it 3 times and the mucus that was stuck for the last 4 days or so, choking me, came out all at once. It was so much that it made me vomit but it completely cleaned out my airway and throat. It has loosened everything in my throat/lungs and thanks to this product, I can breathe and not panic while I recover from COVID. I saw a lot of reviews about cost. That it shouldn't cost 60-70 bucks. I would have paid anything if I would have known it worked so well. If you have allergies, I couldn't suggest this product enough.

## What is AirPhysio?

AirPhysio is an Australian Made and Owned, International Award-winning medical device designed to assist with mucus clearance and lung expansion.

The device assists with maintaining optimal lung capacity and hygiene. AirPhysio is on the ARTG for Australia and EC for Europe for medical devices and has been validated by Griffith University. We also offer a sports version for elite athletes who want that additional advantage.

The AirPhysio device lasts for 1-2 years with full warranty from our Australian Made and Owned company and comes with an option for filters for multiple user options and better hygiene.

## How does it work?

AirPhysio uses an all-natural process called Oscillating Positive Expiratory Pressure which is similar process to the cough mechanism. It combines the expanding diaphragm (from breathing out), along with a stainless steel ball bearing which creates a seal in a cone in the devise. This is similar to the closing of the vocal cords used in a cough mechanism for building pressure.

The difference is that the average cough only happens once every 2 seconds, AirPhysio creates a similar effect 15 to 35 times per second. This expands and contracts the airway walls at a faster rate, helping to shake and loosen the mucus, creating a more efficient and effective method of expelling the mucus and foreign particles from the lungs.

Airway with a mucus plug

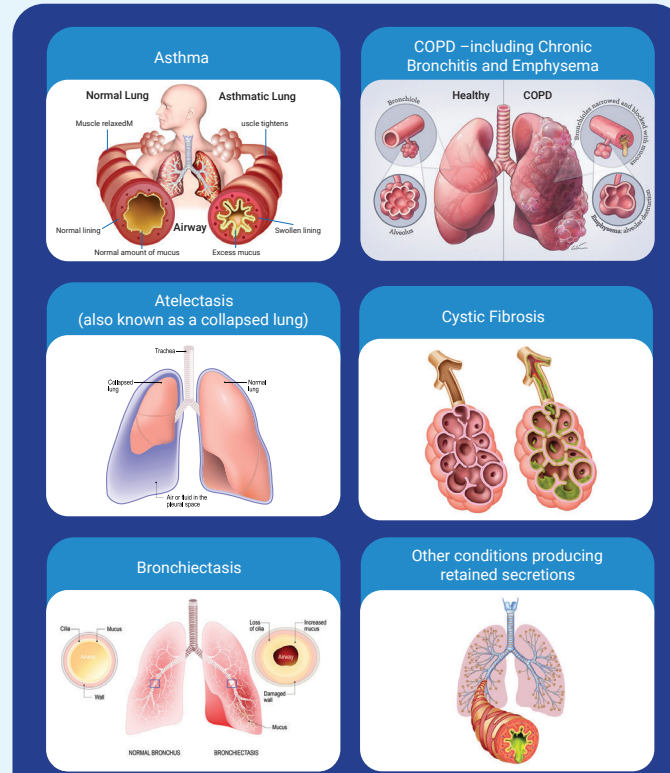

Resistance holds the airways open

Pulses help thin and loosen mucus while the airways are held open

## Why is AirPhysio Needed?

During our lives, we all experience a form of mucus dysfunction. Whether this be a chest cold (bronchitis) or more extreme effects brought on by Asthma, COPD, Bronchiectasis etc... Excess mucus is created as a means of defending our lungs against infection from bacteria, viruses or other pathogens and foreign particles like smoke, fumes or pollution. If the infection continues for too long, then it becomes mucus dysfunction, leading to inflammation, agitation or even an asthma or respiratory attack.

Respiratory conditions like asthma, bronchiectasis, cystic fibrosis and COPD experience these conditions more often and actually lose up to 64ml of lung function per year (1-2 shot glasses) due to mucus dysfunction.

AirPhysio helps to Break the infection cycle by helping to perform the following:

1. Clear the contaminated mucus from the lungs
2. Get the mucociliary escalator functioning more effectively to reduce further infection
3. Improve lung capacity by removing blockages (like mucus plugs) and reinflating the lungs

Vibration & positive pressure helps clear mucus naturally

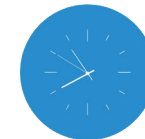

PEP assists in maintaining airway clearance and bronchial hygiene

Prevents pulmonary complications after surgery

It is reliable, handheld & portable

Approx. 5-10 mins, 1-2 times per day

Single Patient Use
